

VMS

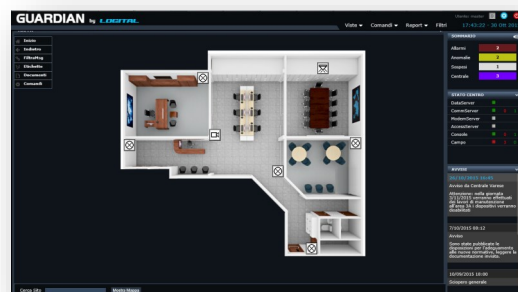

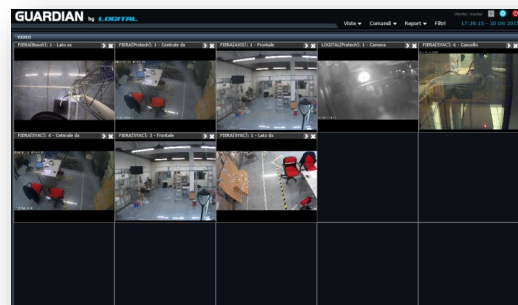

More value to images with
the first Video Management
System integrated with
safety data

Guardian VMS

Not only images is the right definition for the **VMS module** of **GUARDIAN**, the first integrated manager able to associate the standard features of a video management system, such as multi-format visualization or digital recording, new generation features such as automatic creation correlations between the flows coming from the cameras and the data generated by the other modules installed.

GUARDIAN VMS, through the native interfacing to the video surveillance equipment, drastically simplifies the consultation and retrieval of sequences linked to events of interest for centralized management.

Access control, such as the anti-intrusion, the anti-fire or the IoT, become in this way the system's clients, dictating the rules with which the video flows are stored and shown to the operator, drastically reducing the time management and increasing supervision efficiency.

2B CONTROL

More value to the intelligence present on the cameras

GUARDIAN VMS offers the possibility to exploit all the native features of the latest generation cameras such as:

- CrossingLine
- Intrusion
- ObjectRemoval
- UnattendedObject

for the generation of events to be communicated to other components of the integrated platform, such as the security module or the people count module, allowing a real and complete exploitation of all the potential offered.

Thanks to GUARDIAN VMS we can integrate:

- ANTEK Aylook
- AVTECH
- CIEFFE Spectiva, Linearis, Proxima
- DAHUA
- ELMO FlexWatch
- GAMS VectorNG, eVision, Libra EV
- HIKVISION
- MESA DVG
- MILESTONE
- PROMELIT
- SAMSUNG SNR 6450
- SYAC Digi Eye 3G, Classic, Lite, Compact
- TATTILE EPOS e FSV
- VIDEOTECNOLOGIE
- WAVELET Wavestore
- AXIS
- BOSCH
- DAHUA
- HIKVISION
- ONVIF
- PROTECH
- RTSP
- SYAC
- SELEA
- Ultrak Max PRO 1000
- Ultrak Max PRO 1000
